Week 3 UseCase to Test Case Generator

Expected Outcome: An enhanced User Story-to-Test Case Generator application that uses LangChain to support configurable model switching and appropriate fallback behavior.

1. Added Langchain model:
2. Demonstration of Switching Models (sized by story, quick draft ,balanced and thorough)
3. Demonstration of Fall Back (if first model fails, a tick mark will allow jump onto the next model
4. Error 429 handling for running out of credits

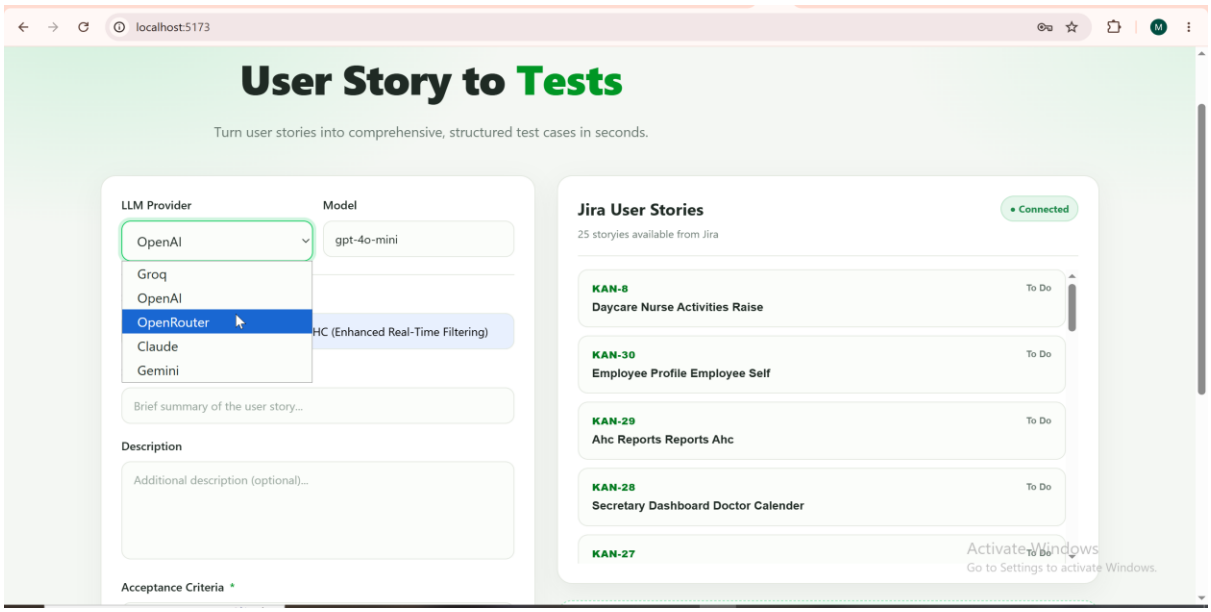

Initially only Groq was configured now added other models, updated .env file

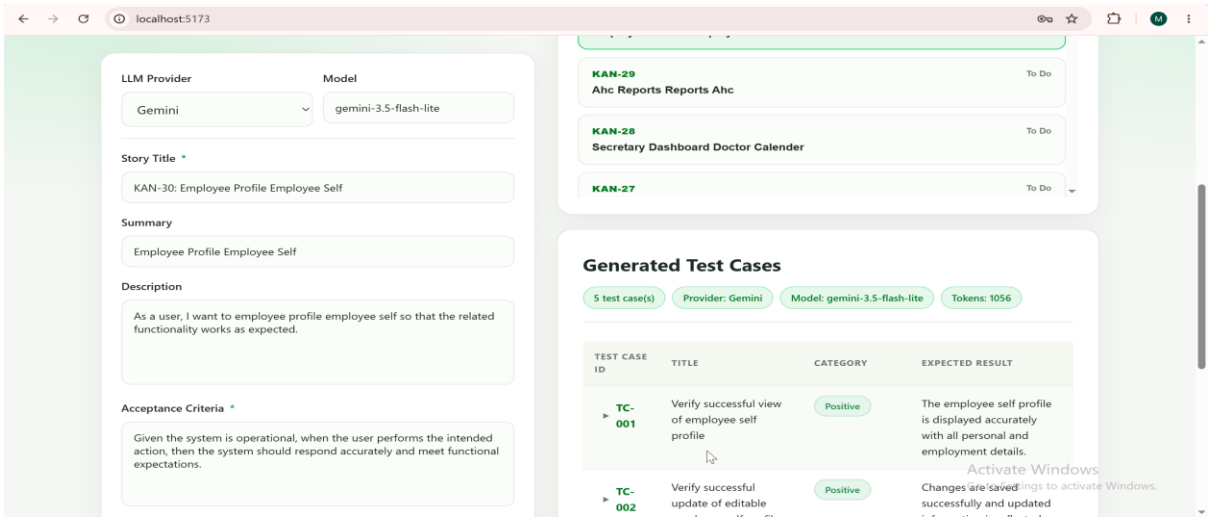

Connected to JIRA

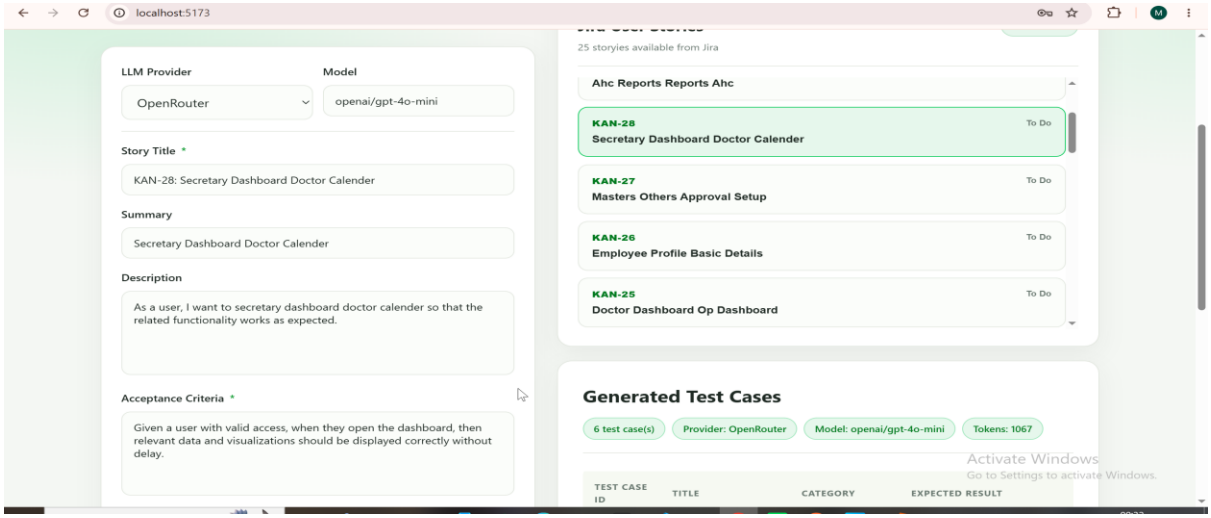

4 Different LLM Providers and Models enabled

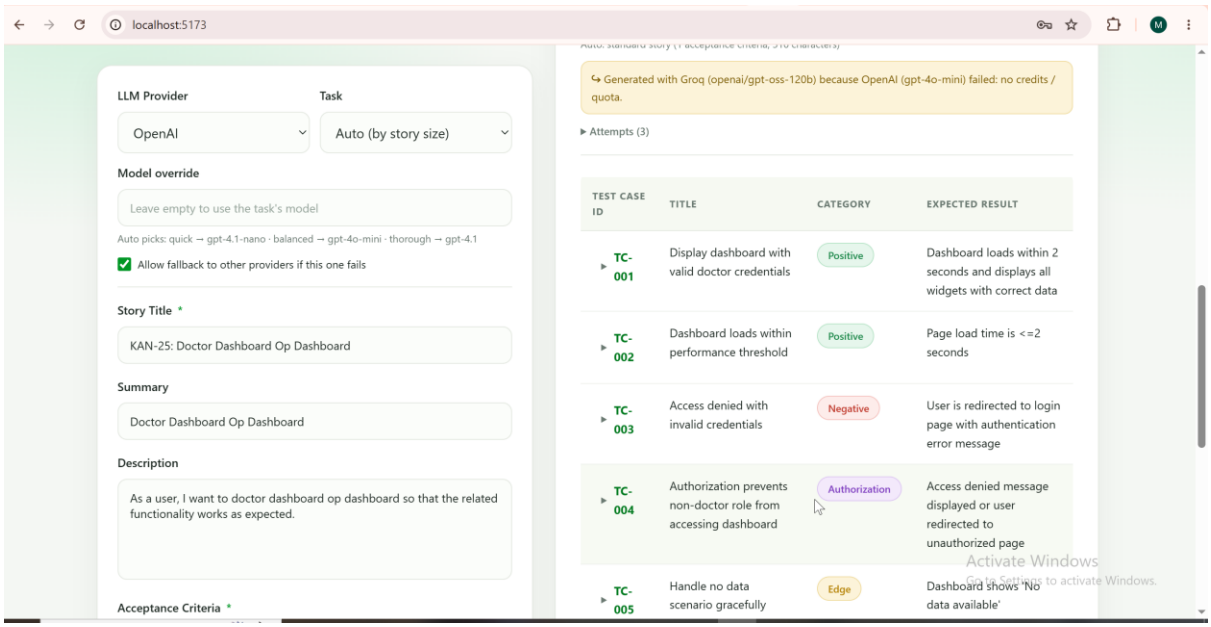

Gemini Model generated Test Cases for KAN-30

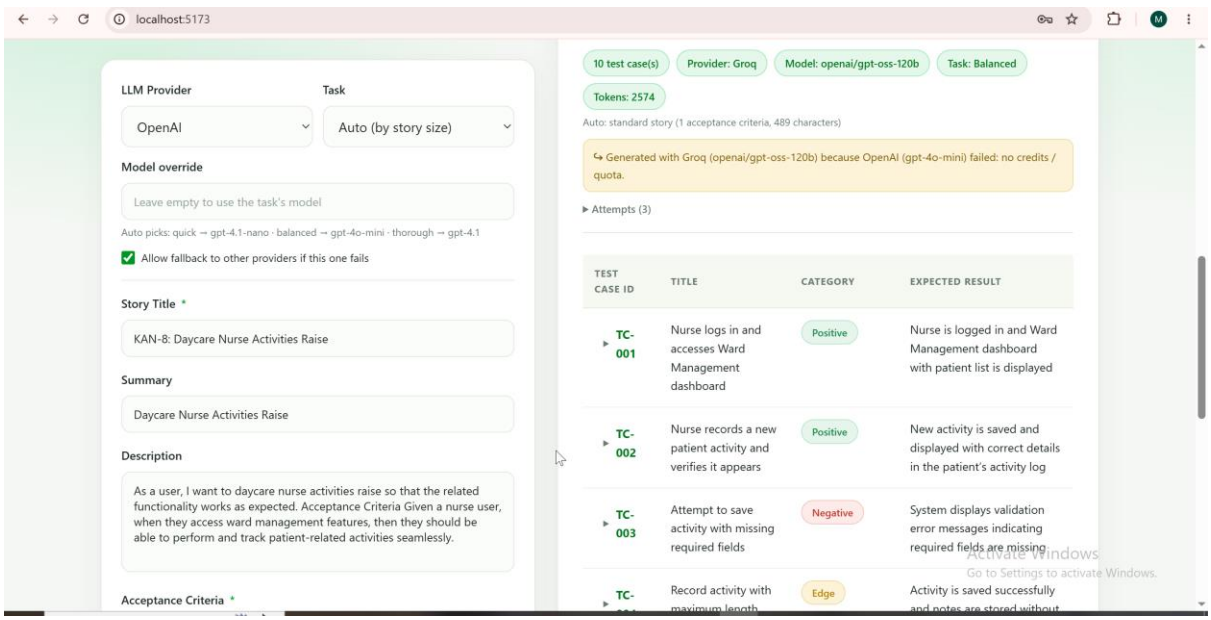

Now Switching to OpenRouter Model Selected Different story KAN-28

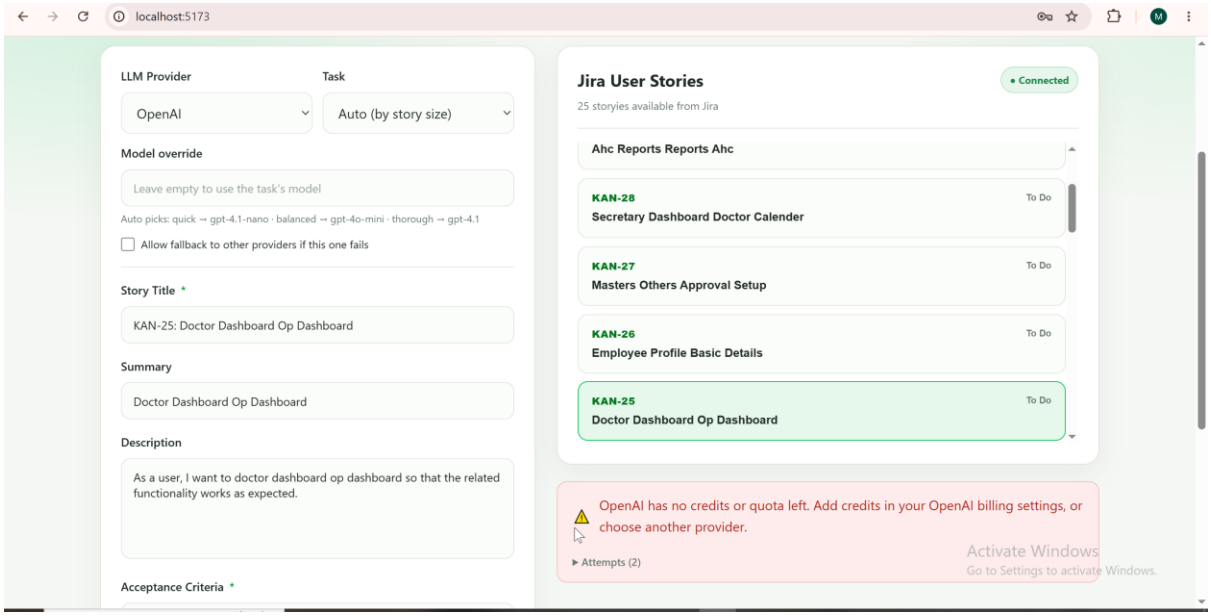

IF first model fails allow fall back is enabled using the tick mark in this example OpenAI credits is ran out to which Gemini LLM was picked to generate the test cases

Since Open AI ran out of Credit it used the Gemini model to create Test Cases

Error 429 ran out of credits OpenAI

The console shows the Error 429
