

Week 4 – Day 01 swagger-api-testcase-generator-updated-ui 2 –

Extracted, Changed Groq Key and executed UI works fine

Gave the prompt

Analyze my entire project as an API Architect.

Currently, after launching the agent, the application navigates directly to the Upload File page. I want to introduce a new UI feature before this page by adding a radio button with two options: Upload File and Upload Link. The existing Upload File flow is already implemented and should remain unchanged. If the user selects Upload Link, the application should accept a URL as input and then it should go through a validation process same as upload file and display generate test cases button to generate test cases based on the information available in the link.. identify the impacted files. Do not implement any changes yet; only provide the list of impacted files. Once the analysis is complete, I will proceed with the implementation in Agent Mode.

Added Radio Button Upload File and Upload Link

Upload booker-api file and generated test cases

Testleaf API Testcase Generator

Swagger uploaded and validated successfully.

STEP 2

Validated

booker-api.yaml

OpenAPI 3.0.3

Errors 0

Warnings 1

Valid Specification

Proceed to generate testcases

Testleaf API Testcase Generator

Clear
